

PUMPSIL®

NEW

Watson-Marlow Pumpsil® platinum-cured silicone tubing

Our promise to you:
LaserTraceability™

The tubing is the heart of a peristaltic pump...

Watson-Marlow leads the world in peristaltic pumps. Now we are showing the way in tube manufacture. Pumpsil®, our own platinum-cured silicone tubing, gives you the optimal performance from your pump. We produce it to the highest standards in a clean-room plant where quality control comes first.

We know the properties a pump tube needs:

- Absolute traceability
- Full bio-pharm certification – USP Class VI, ISO10993
- Class J, clean room manufacture to ISO9001 2000, cGMP guidelines

What Pumpsil® offers...

- Laser-etched lot number end-to-end ensures full traceability
- High level of purity and clarity: very low leachables
- Ultra-smooth bore to control protein binding and bacterial growth
- Excellent flow stability for accurate dispensing
- Tight surface cure, with non-tacky surface

Certification

Pumpsil® meets or exceeds the standards laid down by quality-testing authorities worldwide.

- **USP class VI requirements**
- **European Pharmacopoeia 3.1.9**
- **ISO10993 requirements**
- **FDA regulations CFR 177.2600 for contact with food**
- **USDA standards**
- **3A standards**

A comprehensive validation pack including full technical specifications and relevant test reports is available in hard copy form or on CD ROM.

That's why Watson-Marlow produce their own...

"A lot of benefit to it ... the regulators (FDA) would see it as a very good step."

Patheon UK, Swindon.

"Brilliant! Lot numbering is very important to us."

Lonza Biologics UK, Slough.

Traceability is fundamental in the biopharm industry, where validated processes must be demonstrated. In response to this vital requirement from our customers, every Watson-Marlow Pumpsil® tube is permanently laser-marked end-to-end with part number, lot number and use-by date. Pumpsil® offers full traceability.

Laser coding produces an indelible print which uses no ink and has no effect on tube performance. It means that, for the first time, lot traceability is carried through from box to bag to the tube itself.

and every length is traceable

Easy to sterilise

Pumpsil® can be sterilised by autoclaving at 121C and 1bar (14.5psi) for 30 minutes. Alternatively: gamma radiation up to 3.5Mrads; or EtO (ethylene oxide) sterilisation.

- Laser-etched for full traceability
- Supremely smooth bore
- Ultra-pure non-leaching platinum cure
- Dimensional accuracy for consistent performance

We don't just laser-etch the tube. Each length is sealed in a polythene bag, labelled with the part number, lot number and use-by date. The boxes are labelled in the same way. We maintain a complete record of every tube lot – from raw materials, to product.

That's traceability.

Double bagging is available as an option.

The result:

A tubing range to match our pumps in quality and operational advantages: reliable, pure, durable, and highly precise for accurate dispensing – backed by global certification. In addition, we offer next-day delivery at prices which guarantee value for money.

The right stuff.

Our custom silicone achieves precision, consistency and durability. The tubing is "addition cured" and is entirely free of the 2,4 DCBA residue associated with peroxide tubing.

We built an ISO 14644-1 Class 7 (Class J/10,000) clean room air conditioned to maintain constant temperature and humidity. Our customers can be sure of a product without impurities.

Each stage of manufacture is performed by state-of-the-art production machinery, supervised by highly skilled personnel.

We achieve an accuracy which is typically a fraction of the published tolerance. 100% on-line inspection plus off-line checks during every run ensure that all Pumpsil® tubing is validated to the highest standards.

G450WS	
ACTUAL TUBE DIAMETER	4.24
TUBE MAXIMUM TOLERANCE	4.53
TUBE MINIMUM TOLERANCE	3.97
AVERAGE WALL THICKNESS	1.70
MINIMUM TOLERANCE	1.80
MAXIMUM TOLERANCE	1.66

Closed loop control using a laser micrometer ensures tight tubing tolerances

Wherever you pump, you'll benefit from using Watson-Marlow Pumpsil®: the experts' pump tubing from the tubing pump experts

Whatever you require

- Watson-Marlow Pumpsil® platinum-cured tubing is available in bores from 0.5mm to 25.4mm and wall thicknesses from 1.6mm to 4.8mm – at **competitive prices**.
- Because we extrude Pumpsil® ourselves, we can produce **custom sizes to order**. Options include variations of bore size, wall thickness, reel length and packaging. We can also supply tube featuring **custom laser-etching**.
- Please contact your local Watson-Marlow Pumpsil® representative to discuss your requirements.
- Pumpsil® is available from **stock for next day delivery**, like other Watson-Marlow tubing.
